Hand Tools

Anvil & Bypass Loppers

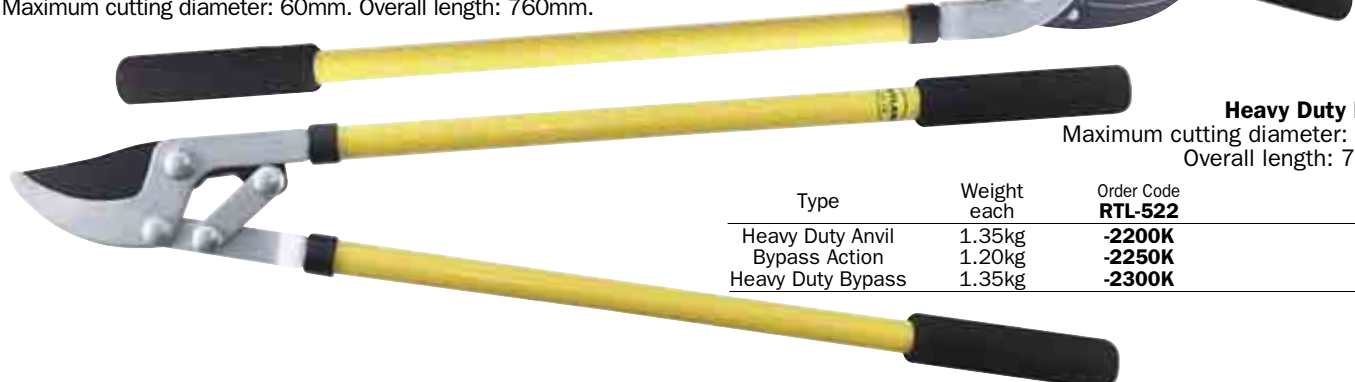

All with powder PVC coated, round tubular steel handles and foam rubber grips.

Bypass

The bypass lopper is designed for cutting live (green) wood or stems. The cutting blade of the lopper passes a counterblade in a scissor bypass action. The pivot point of the Rutland lopper is slightly offset from the centre line of cutting; this creates a slicing action during cutting, which greatly reduces the effort required when pruning live wood and spreads wear over the full length of the blade. For accurate pruning and clean cuts. Compound jaw action. Maximum cutting diameter: 60mm. Overall length: 760mm.

The anvil lopper is designed for cutting old, hard and deadwood. The anvil supports a wide area of the branch while the sharp narrow upper blade is forced through the wood with only a minimum amount of slicing action. Anvil draw action prevents branch slippage. Cuts with minimum effort. Compound jaw action. Maximum cutting diameter: 60mm. Overall length: 730mm.
